## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA**

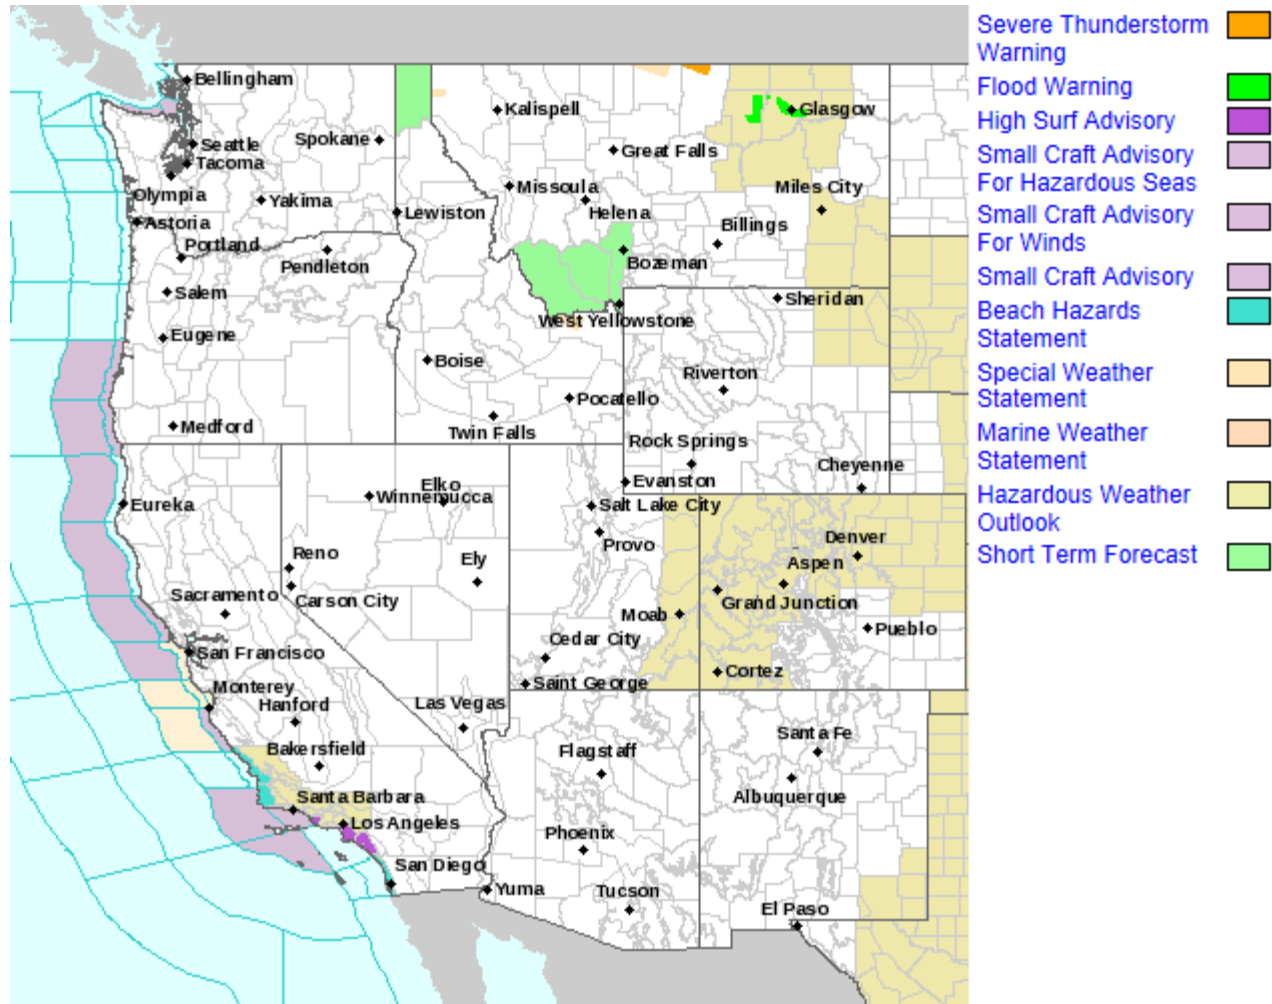

High pressure over California will weaken today. Low pressure in the Eastern Gulf of Alaska will begin to have more influence over the Northern Operations area later today as southwest to west winds develop, especially across northern and eastern areas. A low pressure trough associated with the Gulf of Alaska low will move over the Northern Operations area Saturday. Mid and high clouds will increase, but precipitation is unlikely. Southwest to west winds on Saturday will gust to near 40 mph and continue at similar speeds Sunday out of the northwest after the trough moves east of the area. A warming trend will begin Sunday as high pressure gradually builds in from the west. At the surface a north to northeast wind pattern will enhance the warm and dry conditions from the lower western slopes of the Sierra to the coastal mountains Sunday through Wednesday. The strongest winds will reach 25 mph or so in the northern and western Sacramento Valley Sunday night into Monday. Another dry low pressure trough will move in during the second half of next week.

### **SOUTHERN CALIFORNIA**

Strong high pressure centered off the Southern California coast will produce very warm temperatures today. Expect afternoon readings to be about 5 degrees warmer than yesterday and valley temperatures will reach the 100-103 degree range. Most of the mountains below 7,000 feet will see highs in the upper 70s and 80s. Minimum relative humidity may drop into the 8-12% range over mid-slope elevations this afternoon. Cooler weather will return for the holiday weekend as a weak trough moves from the Pacific Northwest into the Great Basin. Onshore pressure gradients will lead to a 5-8 degree cool down Friday along the coast with more modest cooling elsewhere. By Saturday and Sunday, look for high temperatures to return to seasonal averages. Some gusty afternoon winds of 15-25 with gusts to 45 mph will be possible in the Kern County Mountains, the Antelope Valley and the Banning Pass over the weekend. The flow aloft will eventually turn more northwesterly, which may lead to local wind gusts and low relative humidity Friday night and Saturday night along the coast of Santa Barbara County. Night through morning marine layer stratus will likely become more prevalent Sunday and Monday over Southern California. Next week, high pressure will rebuild over the central part of the state, which will result in hot temperatures again across Central California, while onshore flow keeps Southern California's temperatures at near average readings. No thunderstorms are expected during the period.
